28

29

30

31

32

33

Placing this winglet correctly is easier with real bricks than with stud.io.
If you made it so far, I'm pretty sure you will figure out how to give the correct angle for it to fit. Contact me if it is not working

You should now have two similar engines !

Once they are both built, and before you fix them onto the wing.

**Add these next parts to cover the remaining empty areas.
(3 per engine)**

- The larger ones for the exterior, buttom part of the engines.**
- The smaller ones for the interior buttom part of the engine. (light grey for the front and dark grey for the back.)**

70

71

72

73

74

Now you can fix the 2 engines on the wing !

Don't forget to push the 8 grey pins into the engine to solidify the build.

Now that everything is attached, you can add this last part underneath the engine to hide the rest.
