Sorry! I made a mistake and thought the 3 x 3 plates were available in blue, they aren't. Please use a 2x3 and 1x3 plate instead. I've changed in the parts lists.

This pieces are meant to help hiding the cables by holding them to the panels. Make sure the cables are between these two pieces and the panels. It was quite difficult to show this in the instruction itself.

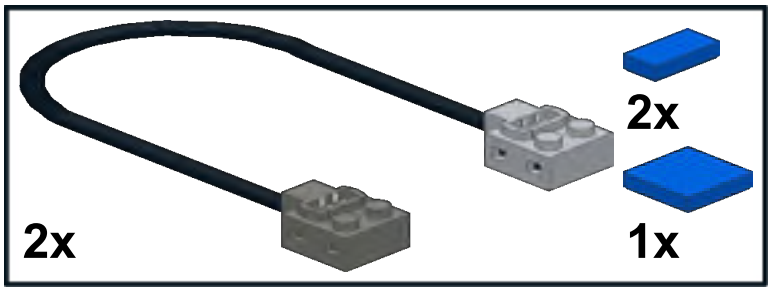
Another mistake again!
Something went wrong and
the cable disappeared somehow.
Please don’t cut the cable as on the picture
above. I can guarantee it won’t work well :)



Note that I have not drawn the cable arrangement as in real life. It can be a bit tricky to fit them in that rather small space but it's possible.

Now, before sealing everything,
please make sure to test the door opening
mechanisms.
Sometimes you have pressed the parts together
with too much force and you have to loosen them
to make it work properly. Because of the limited space the front door
mechanism hade to be constructed in a way that makes it pretty weak so
you may have to do some adjustments there.
